

Navy Year 2000 Tracking System (NY2KTS)
Software Release Notes
Version 2.1
16 October 1998

Software Change Description:

SCR #:	Description of Change
98-21	Ability to create reports based on Major Claimant/Command (Echelon II) Level.
98-22	Corrected deficiency with the Identified Systems by Site Report (Y2K01R4). The report did not display all of the identified systems since it looked at the Active Inactive Status indicator and this field has invalid data due to older versions of the NY2KTS software still being used. The Active Inactive Status indicator field contained values of 'Y', 'N', and blanks.
98-23	Correct deficiency with with the Interface MOA Summary Report (Y2K02R09). The report had a problem in the summary totals due to system records having NULL values.
98-24	Enhanced the Individual System Report (Y2K02R18) to display all of the information for the system including Phase Transition History, Subsystems, and Points of Contact data.
98-25	Enhanced the Logon screen to display the Security Disclaimer.
98-26	Enhanced the Main Menu to display FOR OFFICIAL USE ONLY on the window. This change will also include report products which are being modified at this time and as they are completed we will provide a new release of the software.
98-27	Correct deficiency with the Systems Information (Y2K01U1) program so that the date fields are wide enough to enter and display the entire date field. Previously the program truncated the dates on the right.
98-28	Removed version numbers from the Report Parameter Menus. The only menu which contains the version number of the software is the Main Menu.

Navy Year 2000 Tracking System (NY2KTS)
Software Release Notes
Version 2.1
16 October 1998

Software Change Description:

SCR #:	Description of Change
--------	-----------------------

- | | |
|-------|--|
| 98-29 | Added functionality to track the Certification Level for all of the Systems. The Systems Information Program (Y2K01U1) has been modified to include a drop down list box of the choices available for the different levels of certification. |
| 98-30 | Enhanced the Systems Information Program (Y2K01U1) to display a message to the user if changes are made to Systems which are identified as Mission Critical. This only includes changes affecting Active Inactive Status and Main/Subsystems/ Platforms as well as new Systems being identified as Mission Critical and removing (deleting) existing Mission Critical Systems. |
